Education		
B.Tech in Computer Science Engineering (AI & ML) , Bennett University, Greater Noida		2023 – 2027
CGPA: 8.5 / 10		
Class XII (CBSE) , Elpro International School	83%	2023
Class X (CBSE) , Elpro International School	95%	2021
Technical Skills		
AI / ML Frameworks: LangChain, LangGraph, Hugging Face Transformers, Scikit-learn, TensorFlow, CNN, RAG architectures, embeddings, vector databases (FAISS), SHAP, LIME, Computer Vision		
Generative AI & LLMs: OpenAI GPT, Anthropic Claude, Google Gemini, open-source LLMs, agentic workflows, agents, prompt engineering, prompt design and optimization		
NLP: TF-IDF, cosine similarity, RNN, LSTM, GRU, sequence modeling, text classification		
Statistics & Analytics: Exploratory Data Analysis (EDA), Probability, Predictive Modeling		
Programming: Python (NumPy, Pandas, Matplotlib), C++, JavaScript		
Web & Backend: FastAPI, Streamlit, REST APIs, React, HTML, CSS, API integration, application workflows, data flows		
Databases & Cloud: SQL, MySQL, NoSQL, FAISS (vector search / embedding workflows), cloud infrastructure basics (AWS / GCP awareness)		
Tools & Concepts: Git, GitHub, version control, Docker, MLOps basics, basic testing practices, output evaluation, Data Structures & Algorithms, OOPs, Agile collaboration		
Projects		
ATSight – AI Resume Analyzer (NLP / LLM)		[GitHub]
- Conducted exploratory data analysis on 200+ resume-JD pairs and built a predictive matching model using TF-IDF and cosine similarity, improving candidate-role matching accuracy by 35%. - Engineered a FastAPI REST backend with a React dashboard delivering ATS scores, keyword gap analysis, and personalized recommendations, generating actionable business insights for recruiters on candidate fit. - Implemented bulk resume upload and automated candidate ranking, reducing manual resume screening time by approximately 85% and accelerating recruiter decision-making.		
MediScan – AI-Based Medical Image Analysis (CNN)		[GitHub]
- Deployed a CNN-based medical image classifier via a Streamlit interface, trained on 15,000+ images and achieving 92% validation accuracy through hyperparameter tuning, dropout regularization, and MLOps-aligned evaluation practices. - Applied data augmentation and normalization techniques improving model generalization by 18%; integrated SHAP for XAI-driven interpretable predictions in healthcare decision-support systems. - Demonstrated analytical problem-solving and ownership across the full ML lifecycle: data preprocessing, model training, evaluation, and explainability analysis.		
PrepWise AI – AI-Powered Voice Mock Interview Platform		[GitHub]
- Developed an AI-powered voice mock interview platform using React, FastAPI, LangChain, and FAISS, leveraging Retrieval-Augmented Generation (RAG) and embeddings to generate personalized interview questions from candidate resumes and job descriptions with semantic vector search. - Built an end-to-end interview pipeline integrating Speech-to-Text, Text-to-Speech, resume analysis, and adaptive answer evaluation, reducing irrelevant question generation by approximately 40% through context-aware retrieval and personalized candidate insights. - Followed version-controlled development workflow with output evaluation at each pipeline stage to validate retrieval and generation quality.		
Research		
Explainable AI (XAI) in Healthcare Systems		March 2026
- Conducting independent research on XAI to improve transparency and interpretability of ML models used in clinical decision-support systems — directly addressing responsible AI development and stakeholder trust. - Applying SHAP (SHapley Additive exPlanations) and LIME (Local Interpretable Model-agnostic Explanations) to identify key features driving model predictions, bridging the gap between model accuracy and real-world deployability. - Exploring integration of XAI techniques into production-ready pipelines, aligning with industry demand for transparent and auditable generative AI systems.		
Leadership & Collaboration		
PR & Outreach Co-Head, Bennett Springer Club		2024–2025
Led cross-functional outreach initiatives and coordinated event promotions for a 200+ member club; strengthened written and verbal communication skills by presenting initiatives to senior faculty and external stakeholders.		
HackStreet (Smart India Hackathon) – PROPHEL		
Built and presented a working AI-powered prototype within a 48-hour hackathon, securing Rank 11 at the college level through rapid iteration and collaborative delivery under time pressure.		
Certifications		
Agentic AI with LangChain and LangGraph – IBM		Sept 2025
<i>Built agent-based LLM workflows using LangChain and LangGraph; covers multi-agent systems, tool use, memory, and RAG pipeline.</i>		
Introduction to Generative AI – Google Cloud		Apr 2026
<i>Covers core generative AI concepts including LLMs, foundation models, prompt engineering, and Google Gemini platform fundamentals.</i>		
Natural Language Processing with Sequence Models – DeepLearning.AI		Feb 2026
<i>Implemented RNNs, LSTMs, and GRUs for sequence modeling tasks including text generation, classification, and named entity recognition.</i>
